Emerging neuroscience and clinical experience bears the deepening relevance of Carl Jung's Analytical Psychology to understand our deeper potential, to facilitate the spiritual meaning of our personal and our patient’s suffering in context of the underlying flow of the psyche and the transcension. From empathy to mirror neurons, from archetypes to the Triune Brain Research, from psychotherapy to Erik Kendal’s Nobel Prize winning research, from Jung’s psychoid space to the neuroplastic mysteries of the brain, Jung’s approach gives us a GPS to comprehend ourselves, others and the world around us. Join us in the first in a series of presentations to explore Jung's psychology and its building blocks.
